

Resume — Machine Learning Engineer

Professional Summary

As a highly skilled developer with a strong foundation in machine learning, the candidate brings expertise in languages such as Python, R, and C, with a proficiency in frameworks like PyTorch. With a track record of contributing to 20 repositories, merging 22 pull requests, and making 271 commits, they have consistently demonstrated their ability to collaborate and drive projects forward. The candidate's experience in conducting 302 code reviews has also honed their skill in ensuring high-quality code. By leveraging their technical expertise and collaborative mindset, they are well-positioned to excel as a Machine Learning Engineer, driving innovative solutions with PyTorch and other cutting-edge technologies.

Experience Highlights

- Developed and implemented code in Python, TypeScript, and JavaScript, adding 38238 lines and removing 7461 lines across multiple files in the Fantastic4 repository.
- Engineered and optimized components using TypeScript, JavaScript, and CSS, merging 10 pull requests and adding 3553 lines of code in the devtrack repository.
- Implemented Python code, adding 46212 lines and removing 21 lines in the GeoPulse repository.

Projects

Fantastic4

A high-complexity project with significant code contributions, totaling over 38,000 lines of code added and 7,000 lines removed.

- Developed and merged 2 pull requests, adding 38,238 lines of code and removing 7,461 lines
- Scaled the project with substantial codebase changes

Technologies: TypeScript, Python, JavaScript, HTML, PowerShell, Shell, CSS, Batchfile

devtrack

An open-source developer productivity dashboard tracking GitHub stats, PR metrics, streaks, and goals, with a medium level of complexity.

- Engineered and merged 10 pull requests, adding 3,553 lines of code and removing 576 lines
- Integrated multiple technologies to create a comprehensive dashboard

Technologies: TypeScript, JavaScript, CSS, PLpgSQL, Dockerfile, HTML, Shell

ray

An AI compute engine consisting of a core distributed runtime and AI libraries for accelerating ML workloads, with a medium level of complexity.

- Added 1,252 lines of code and removed 272 lines, contributing to the project's growth

Technologies: Python, C++, Java, Starlark, TypeScript, Cython, Shell, Dockerfile, C, Objective-C

GeoPulse

A high-complexity project with significant Python code contributions, totaling over 46,000 lines of code added and 21 lines removed.

- Developed and added 46,212 lines of code, with only 21 lines removed

- Implemented substantial codebase changes

Technologies: Python

Skills

Category	Skills
Programming Languages	R, C, Python, Go, TypeScript
Frameworks & Libraries	PyTorch, Express, React, FastAPI
Data Science & Machine Learning Tools	MLflow, NumPy, ONNX, Pandas
Cloud & DevOps	AWS, Docker, GitHub Actions
